SUMMARY

Full-Stack .NET Developer with hands-on experience building ASP.NET Core Web APIs, SQL Server-backed systems, and role-based web applications. Built Saiyad, a marketplace and auction platform with 110+ API endpoints, JWT authentication, and SQL Server transactions for bidding integrity, using Clean Architecture and EF Core. Currently leading a 4-person development squad at Egypt's Digital Pioneers Initiative (DEPI), building structured, maintainable backend systems.

TECHNICAL SKILLS

- Backend:** C#, .NET 8, ASP.NET Core Web API, EF Core, LINQ
Database: SQL Server, T-SQL, Stored Procedures, Views, ERD Design
Architecture: Clean Architecture, SOLID Principles, Repository Pattern, RESTful API Design
Auth & Security: JWT Bearer, Role-Based Authorization, Claims-Based Identity
Frontend: Vanilla JavaScript, JavaScript ES6+, Vue.js 3, HTML5, CSS3, Bootstrap 5
Tools: Git & GitHub, Postman, Swagger / OpenAPI, Visual Studio 2022, VS Code, Claude Code, AI-Assisted Development

PROJECTS

Saiyad — Marketplace & Auction Platform
ASP.NET Core (.NET 8) · SQL Server · EF Core · Clean Architecture · JWT · Vanilla JavaScript SPA · Bootstrap
[UI GitHub](#) | [Backend GitHub](#) | [Live Demo](#)

2025

- Designed and built a full-stack marketplace and auction platform supporting 5 user roles (Admin, Customer, Fisherman, Bait Seller, Auctioneer).
- Implemented 110+ RESTful API endpoints across product, cart, checkout, order, auction, wallet, and admin modules.
- Built auction and bidding workflows using SQL Server transactions to protect bidding integrity under concurrent activity.
- Developed wallet and balance-tracking logic to manage simulated fund flows between marketplace participants.
- Secured platform workflows with JWT authentication and role-based authorization across all user types.
- Built the frontend as a single-page application using Vanilla JavaScript (ES6+) and Bootstrap.
- Structured the backend into a 3-layer Clean Architecture (Domain, Data, API) with the Repository Pattern to separate business logic from data persistence.

Khidma — Service Marketplace Database
SQL Server · T-SQL · ERD Design · Normalization
[GitHub](#)

2025

- Designed a normalized SQL schema enforcing strict referential integrity across a multi-actor service marketplace.
- Authored 63 stored procedures to manage booking lifecycles while keeping the application layer thin.
- Built 26 parameterized views to optimize complex joins for reporting and maintainability.

AS Store — E-Commerce Web Application
Vue.js 3 · JavaScript ES6+ · Bootstrap 5
[GitHub](#) | [Live Demo](#)

2024

- Built a Vue.js 3 single-page storefront with real-time filtering and dynamic search.
- Implemented a stateful shopping cart with stock validation and a streamlined 3-step checkout flow.
- Added client-side route guards and session management to protect authenticated views.

WORK EXPERIENCE

Full-Stack .NET Developer Trainee | Team Lead
Digital Egypt Pioneers Initiative (DEPI), Ministry of Communications — Egypt

Nov 2025 – Present

- Lead a 4-person development squad and a graduation project team, coordinating sprint planning and delivery under real-world constraints.
- Break down technical specifications into sprint-level tasks, balancing scope, timeline, and code quality.
- Build RESTful APIs using Clean Architecture, structuring code for isolated, high-coverage unit testing.
- Design SQL Server schemas from ERD through implementation, maintaining referential integrity throughout.

EDUCATION

Bachelor of Science in Computer Science
Zagazig University, Faculty of Computers and Information — Egypt
Relevant coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Software Engineering
Completed 16-month mandatory military service, Egyptian Armed Forces (Jan 2023 – May 2024)

Sep 2017 – Jul 2021
